Medicine,

Chelsea Bridge Road,

London, S.W.1.

8th March, 1955.

Dear Professor Lederberg,

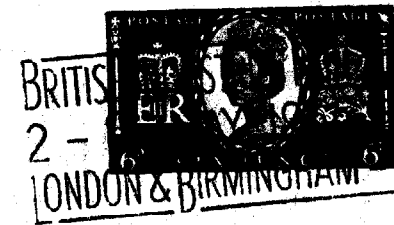

I thank you for your letter of March 1st. I am not sure that our evidence is as complete as it should be that there are several distinct products of the action of an individual blood group gene. I think this idea has appeared in only one paper so far and I am sending this to you under separate cover. So much depends on the homogeneity of the gene products studied and in the field of the human blood groups the products are mucoids and one is never able to establish for certain the homogeneity of such material.

Yours sincerely,

A handwritten signature in dark ink, appearing to read 'W.T.J. Morgan'.
